

» The QuickChange design and staff-friendly features promote continuous processing, ensuring your customers and staff will embrace this new service.

The QuickChange is a fully automated, self-service coin deposit solution which enables financial institutions to draw more customers to the branch. QuickChange can eliminate up to 400 hours per year of non-customer-facing labor, enhance customer engagement, and increase core deposits. As a destination service, QuickChange also offers the potential for fee income. Increase branch foot traffic and build core deposits while also providing staff with important customer interaction opportunities with existing clients and potential new ones.

» Expand your potential client base.

Bilingual instructions on a large easy to-read display make QuickChange accessible to a larger demographic. The simple "A" and "B" button navigation increases ease of use. The design ensures easy accessibility to clients with physical disabilities, while the child friendly features provide a fun and educational opportunity for even the youngest customers.

Patented WAVE™ Technology

WAVE technology delivers precise coin authentication by performing five different authenticity checks on each coin. Unwanted foreign coins, slugs and tokens will be off-sorted and returned to the customer without degrading the counting process. This reduces the opportunity for fraudulent use.

Auto-feed with Safety Interlock

Automatically and safely advances coins without user intervention. Safety interlock ensures a safe user experience.

Simple Two-Button Operation

Dual language capability, and large display make it easy for children and adults to use.

Coin Output Options

Coin bags or dual coin bins — choose the best coin capture option to meet your needs. Quick release bag holders mean removal and changeover is quick and easy, while bins are strong, durable and can be moved with minimal effort.

Custom Branding Opportunities

Door façade insert, receipts, and optional overhead sign or electronic display can all be customized with your branding. Screen customization includes desired colors and logo as well as on-screen messaging before, during and after each transaction.
